

BRICS Energy Research Cooperation Platform: practical steps to its realization

Alexey Gromov,
Principal Director on Energy studies,
Institute for Energy and Finance

Beijing, 5th June 2017

Goals

conducting independent analytical and research activities on energy development and elaborating proposals for a coordinated energy policy and strategy

contribution to developing of fair price markers for the global oil and gas markets

creation of joint scenarios of the development of traditional and renewable energy sectors

verification of forecasts and estimates of world energy sector development

assistance in implementation of joint investment projects in the energy sector

development of cooperation in the sphere of energy technologies

Structure

- Each of the BRICS countries nominates the responsible representatives (public officials, research institute, company or any other organization) who will participate in the activity of the analytical platform, as well as the contact person for coordination
- The format of analytical platform does not implement the creation of any rigid structures and financing obligations.
